500 live fowls, which were like those of the Vierländen, this time without any boiled or roast ones, together with many roots, some red, some white, a good lot of potatoes which tasted almost like bread, and which are used by these people in the same way; and some hundreds of sugar-canes, great quantities of *pisang*[1], being Indian figs as large as a cucumber a span in length and of proportionate thickness, with a green rind. When one peels this off [the pulp] tastes like figs, or as sweet as honey: there are sometimes as many as a hundred on a single bunch. The leaf is from two to three feet broad and from six to eight feet in length. It is with these that our first parents should have covered themselves in Paradise after their unfortunate Fall, because it is almost the largest and strongest leaf which one meets with in Morning and Evening lands.

No animals were met with, as far as we penetrated on this occasion, except sundry species of birds; but there may be many other animals farther in the interior of the country, as the natives seemed acquainted with pigs when they saw some on board our ships.

The natives prepare their meals in pots made of clay or earth. Each household appeared to us to have its own.

The houses were from forty to sixty feet [*schuh*] long, six to eight feet [*schuh*] in width, and of similar height, set up on wooden stakes, daubed over with luting and covered in with palm leaves. As regards their subsistence it appears that it must be procured by tillage of the soil, as we saw it everywhere planted and bearing crops. Moreover the fields or lands were all measured off with a cord, and very neatly cultivated. At the time of our visit all their crops were maturing: the fields and trees were in full bearing, and I feel sure that if we had explored this country right through many good things would have been met with, since we were there in just the best season of the year.

No remarkable furniture was found inside their houses, except some red and white coverlets [*decken*] which they often use as apparel, and also for sleeping under. These coverlets felt like silk, to the touch, so that one could almost conclude they had looms by means of which they made them themselves.

These natives were universally blithe and merry, well-built, strong in limb, not exactly slender, yet nimble on their feet; friendly and pleasant in manner, but submissive withal, and also very timid. Most of them, when bringing any object such as

[1] *Pisang* is the Malayan generic term for the banana.

fowls, or other produce, would cast it all down before us and retire with all possible speed, and go their way without ceremony.

As for their complexion they are brownish, about the hue of a Spaniard, yet one finds some among them of a darker shade and others quite white, and no less also a few of a reddish tint as if somewhat severely tanned by the sun. Their ears were so long that they hung down as far as to the shoulders. Some wore white ornaments in the lobes as a special embellishment. They were painted on their bodies with wonderful birds and animals, although some were handsomer than others.

The women had their features streaked for the most part with a red pigment, which is of a much brighter shade than any we have anywhere else seen or found; but we do not know from what they make this beautiful colour. The women were all clothed with red and white wraps [*decken*]; and each had a small hat made of straw or rushes. They sat down before us and disrobed, laughed, and were very friendly. Others called from a distance from their houses and beckoned us with the hand to come to them; and there was, in the place where we were standing, a village of about twenty houses.

The people had, to judge by appearances, no weapons; although, as I remarked, they relied in case of need on their gods or idols which stand erected all along the sea shore in great numbers, before which they fall down and invoke them. These idols were all hewn out of stone, and in the form of a man, with long ears, adorned on the head with a crown, yet all made with skill: whereat we wondered not a little. A clear space was reserved round these objects of worship by laying stones to a distance of twenty or thirty paces. I took some of the people to be priests, because they paid more reverence to the gods than did the rest; and showed themselves much more devout in their ministrations. One could also distinguish these from the other people quite well, not only by their wearing great white plugs in their ear lobes, but in having the head wholly shaven and hairless. One of them was with us on board the ship as above related. They wore a head-dress of white and black feathers which were just like storks' feathers: so that we thought it likely that some of the storks in migrating from Europe at their accustomed season must rest here[1]. .....As the evening was drawing near we re-

[1] Here intervenes a long, speculative, and uninstructive dissertation on the migration of storks, quite irrelevant to the narrative.

which is, however, misleading. They are wiry, lithe, strong, active, tireless on the march, capable of carrying heavy burdens long distances, indifferent to weariness, and seemingly equal to any amount of effort they might be induced to make. We saw this frequently exemplified on our tramp around the island, when, after a weary day's march, we would come into the camp foot-sore and tired, while they, fresh and active apparently, would go to work catching and dressing sheep, building fires, etc. If we complained that the water was "vai kava," bitter, they would endeavor to explain where better could be found and immediately start off, with bucket and canteen, on a tramp of a mile or two over the plain, or down into a crater, in order to bring us "vai maitai," good water.

These people proudly claim direct descent from the image and platform builders. It is not the writer's province to discuss this point, although strong arguments might be adduced to demonstrate the contrary. Be that as it may, it is very evident to the most casual observer either that the modern Rapa Nuiis belong, whether wholly or, which is more probable, in part, to a different race or that they are the "degenerate sons of worthy sires."

The color of their eyes is dark brown, with black brows and lashes, neither very heavy. Their expression of countenance is pleasing, mild, frank, modest, intelligent, and somewhat sad. They are slender but well formed, clean of limb, and the various parts of the body are well proportioned to each other. Their foreheads, while not very broad, are of good height and but slightly receding, which is also true of the facial angle generally. The head is well balanced and cheek bones are notably prominent. Their nose is quite straight and well shaped, with no marked spreading of the alae; mouths of moderate size and usually filled with excellent teeth, which, when the jaws are closed, come squarely into apposition; lips rather thin; hands and feet small. It may be mentioned that they attribute the beautiful appearance and excellent condition of their teeth to the chewing of sugar cane, large quantities of which they consume as food. There is nothing savage or repulsive looking about them, and some of their young women are decidedly comely and attractive. While in their habitations the evidences of good housewifery are nearly nil, they are quite cleanly in their personal habits and there is no unpleasant odor noticeable about their bodies. They all dress in European costume. They are a bright, intelligent, quick-witted people, of rather a nervous temperament; tractable and gentle in disposition, decidedly sympathetic and tender-hearted and markedly emotional in their natures, so that they are easily moved either to tears or laughter. In evidence of the latter trait in their character one or two instances may be adduced.

When the Catholic mission was first established on the island Chief Mati took a great liking to the reverend father in charge, evinced the greatest affection for him, and finally adopted him as his son. Such
